## COVER LETTER

---

Dear Hiring Manager,

I am writing to express my interest in the Full Stack Developer opportunities at your organization. With hands-on experience building production-grade web applications using React, Node.js, Java/Spring Boot, MongoDB/MySQL, and AWS, this profile fits well with teams seeking engineers who can own features end to end and deliver measurable impact.

Across recent roles and projects, I have worked on distributed systems handling 10K+ daily requests with sub-200ms response times, implemented Redis caching strategies, and designed RESTful APIs with 99.9% uptime for high-traffic platforms. I have also improved application performance by up to 40% through backend refactoring, query optimization, and frontend performance tuning, while using CI/CD pipelines and unit/integration tests (Jest, JUnit) to maintain reliability.

I am particularly interested in roles where I can contribute to scalable backend services and modern frontends, collaborate with cross-functional teams, and continuously improve performance and developer experience. I have attached my resume and would be glad to discuss how this experience can support your engineering roadmap or any relevant openings in your team.

Thank you for your time and consideration.

Sincerely,

Sivadora Madepalli
